I don't see this search in the search log..are you sure Paula approved it and sent the search to Biotech? Linda

Hi Paula,

Will you please authorize a rush search for an Election which just got transferred to me?

Thanks,

Jennifer

STIC:

Please search amino acids 1-174 of SEQ ID NO:2; fragments from SEQ ID NO:2 which are at least 30 contiguous amino acids in length; and fragments from SEQ ID NO:2 which are at least 50 ontiguous amino acids in length- from Serial No. 10/068,956.

```
protein-related liver proteins (PGRP-L), and mucleic acid molecules encoding them. The polypeptides of the invention can be used as food additive or preservative to increase or decrease storage capabilities.

The PGRP-L polymucleotides are used for dirromosome identification. They are also useful as probes for diagnosing disorders related to the female reproductive system, particularly breast and ovary cancer. They are also useful in the gene therapy of breast and ovarian cancer. The PGRP-L polymucleotides, polymeptides, and their antibodies, agonists and antagonists are useful in the diagnosis, treatment and prevention of antagonists are useful in the diagnosis, treatment and prevention of cancer particularly breast and ovarian cancer, and cancers of the adrenal of gastrointestinal tract, liver, lung, or urogenital; immune disorders such as Addison's disease, allorgies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, cardiovascular disorders such as myocardial ischaemias; wund healing; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as Alzehimer's disease, cerebral anoxia and parseitic infections the protein as viral, bacterial, fungal and parseitic infections. The present sequence is human peptidoglycan recognition protein-related liver protein (hPGRP-L). This protein has
                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated nucleic acids encoding human and murine peptidoglycan recognition protein-related liver (PGRP-L) proteins, useful for preventing or treating autoimmune diseases e.g. rheumatoid arthritis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention relates to human and murine peptidoglycan recognition

Isolated polypeptides, which may be peptide hormones, which are identified by high throughput genome-based biology which identifies genes and gene products as therapeutic targets for treatment of diseases such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides polypeptides (AAG65886-65918) which may be peptide hormones (including insulin, growth hormones, chemokines, cytokines, heuropeptides, integrins, Kallikrelins, lamins, melainis, natruiretic hormones, neuropeptin, pituitary hormones, pleiotrophins, prostaglandins, secretogranins, selectins, thromboglobulins, thymosins) identified by high throughput genome-based biology and polynuclectides (AAI67176-67208) encoding them. The polypeptides can be expressed by standard recombinant methodology. The polypeptides are useful in the treatment of disease such byper and hypocension, obseity, builmia, anorexia, growth abnormalities, asthma, manic depression, dementia, delirium, mental retardation, mental evelopment disease, Tourette's syndrome, schizophrenia, growth, mental or sexual development disorders, and dysfunctions of the blood cascade or sexual development disorders, and dysfunctions of the blood cascade or sexual development disorders, and dysfunctions of the blood cascade.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         system including those leading to stroke. The polymucleotides may be used as diagnostic reagents through detecting mutations in the associated gene and for chromosome localization and for tissue expression studies. The

diseases in New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.

Claim 14; SEQ ID NO 2263; 205pp; English.

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA5401). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

Kimura T; Kato S, WPI; 2000-182694/16.

Novel human proteins having hydrophobic domains useful for treating osteoporosis, Alzheimer's disease, Parkinson's disease, asthma, multiple sclerosis, rheumatoid arthritis, cancer, anemia, and stroke.

Claim 1; Page 211-212; 351pp; English.

infections diseases caused by viral, bacterial, fungal or other infections diseases caused by viral, bacterial, fungal or other infections. The protein is also used for treating autoimmune disorders such as multiple sclerosis, systemic lupus erythematosus, and rheumatoid arthritis. It is also useful in the treatment of allergic reactions and conditions such as asthma, and in immune suppression after organ conditions such as asthma, and in immune suppression after organ conditions. The protein is useful in regulation of haematopoiesis and consequently in the treatment of mycloid or lymphoid cell deficiencies. It is also used in compositions for lissue growth or deficiencies. The protein is also used in the treatment of osteoporosis or osteopartritis and in the treatment of periodontal disease and other coth repair processes. The protein is used in the treatment of nervous system disorders such as Alzheimer's disease, Parkinson's disease, and Huntington's disease. They are useful for protection or regeneration and treatment of lung or liver fibrosis, reperfusion injury in various treatment of lung or liver fibrosis, reperfusion injury in various also used for promoting or inhibiting tissue differentiation. They are activities and as a fertility inducing therapeutic. They are used for treating various coagulation disorders and in treatment and prevention of conditions resulting from coagulation activities e.g. myocardial conditions resulting from as receptors, receptor ligands or inhibitors or agonists of receptors/ligand interactions. They are used to inhibitors or agonists of receptor/ligand interactions. They are used to inhibitors or agonists of receptor/ligand interactions. They are used to This sequence represents a human protein of the invention, which has hydrophobic domains. The DNA sequences can be used as a probe or as a genetic marker. The protein can also be used as a marker, and to identify potential genetic disorders. The DNA and protein can also be used as nutritional sources or supplements. The protein exhibits cytokine, cell proliferation, cell differentiation activities and induces production of other cytokines in certain cell populations. The protein also exhibits immune stimulating or immune suppressing activity. It can be used in the treatment of various immune deficiencies and disorders, and to treat

The present sequence represents a lipid-associated molecule (LIPAM).

LIPAM polypeptides, polynucleotides and agonists are useful for treating a condition associated with decreased expression of functional LIPAM. The antagonist is useful for treating a disease associated with reacting a condition or disease associated with the expression of LIPAM. The polypeptides, polynucleotides, agonists and antagonists may also be used for preventing these diseases. These polypeptides, polynucleotides, agonists and antagonists may polynucleotides, agonists and antagonists are particularly useful for diagnosing, treating or preventing cardiovascular (e.g. atherosclerosis, plypertension, aneurysms, congestive heart failure, angina pectoris, or ischaemic or rheumatic heart disease), lung (e.g. oedema, emphysema or bronchitis) gastrolintestinal (e.g. nausea, peptic ulcer or Crohn's disease), lipid metabolism (e.g. Fabry's disease, diabetes mellitus or hyperlipidaemia), autoimmune/inflammatory (e.g. acquired immunodeficiency syndrome (AIDS), anaemia, asthma, gdisease, multiple sclerosis, province (AIDS), anaemia, asthma, anaemia, arguments or annotation and astronary (e.g. acquired immunodeficiency province (AIDS), anaemia, asthma, gdisease, multiple sclerosis, and province (AIDS), anaemia, asthma, and annotation and annotations and annot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Parkinson's disease, anxiety, schizophrenia or amnesia), metabolic (e.g. Addison's disease), developmental (e.g. Cushing's syndrome), endocrine or

The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RGWHWVGAHTLGHNSRGFGVAIVGNYTAALPTEAALRTVRDTLPSCAVRAGLLRPDYALL

multiple sclerosis, rheumatoid arthritis and ulcerative colliss; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as Alzheimer's disease, cerebral anoxia and epilepsy; and infectious diseases such as viral, bacterial, fungal and parasitic infectious. The present sequence is murine peptidoglycan recognition protein- related liver protein (mPGRP-L). This protein has molecular weight of about 57,764 Da

The invention relates to human and murine peptidoglycan recognition protein-related liver proteins (PGRP-L) and nucleic acid molecules encoding them. The polypeptides of the invention can be used as food additive or preservative to increase or decrease storage capabilities. The PGRP-L polynucleotides are used for chromosome identification. They are also useful as probes for diagnosing disorders related to the female reproductive system, particularly breast and ovary cancer. They are also useful in the gene therapy of breast and ovarian cancer. The PGRP-L polynucleotides, polypeptides, and their antibodies, agonists and antagonists are useful in the diagnosis, treatment and prevention of cancer particularly breast and ovarian cancer, and cancers of the adrenal disorders such as Addison's disease, allegies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                           20-AUG-1999;

                                                                                                                                                                                                                                                                                                                                                  ACC59924 to ACC59958 encode the human immune response associated proteins given in ABR43205 to ABR43239, designated IRAP-1 to IRAP-29 (I). (I) have antiallergic, antialframmatory, antianaemic, antiparkinsonian, notropic, anticalcurulsant, antiarteriosclarotic, antiasthmatic, antigout, immunosuppressive, antithyroid, cytostatic, hepatotropic, dermatological, antidabelic, neuroprotective, osteopathic, antiathrathric, natiparasitic, thyromimetic, antipactive, osteopathic, ophthalmological, antirheumatic, haemostatic, antipactivic, uropathic, ophthalmological, antirheumatic, haemostatic, antipactivic, uropathic, protoxocacide and fungicide activities, and can be used in gene therapy. Human IRAP polynucleotides agonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of IRAP, such as immune system disorders (e.g. AIDS, asthma, allergies, autoimmune thyroiditis, contact dermatitis, Crohn's disease, diabetes mellitus, glomerulonephritis, Good pasture's syndrome, gout, antical and antial 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         multiple sclerosis, osteoarthritis, osteoporosis, pancreatitis, Reiter's syndrome, rheumatoid arthritis, Siogren's syndrome, uveitis), neurological disorders (e.g. Alzheimer's disease, Parkinson's disease or epilepsy), developmental disorders (e.g. renal tubular acidosis, anaemia or mental retardation), muscle disorder (e.g. rardiomyopathy, myocarditis or dermatolyositis), cell proliferative disorders (e.g. arteriosclerosis, haderoselerosis, cirhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), or viral, bacterial, fungal, parasitic, protozoan or helminthic infections
                                                                                                                     New human immune response associated proteins and polymucleotides, useful for diagnosing, treating or preventing immune system disorders, e.g. AIDS or anemia, cell proliferative disorders, e.g. cancer, or neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          255 GWHIQGSHTYGFNDIALGIAFIGYFVEKPPNAAALEAAQD-LIQCAVVEGYLTPNYLLMG 313

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis or diabetes, and in chromosome mapping, tissue typing or

Claim 1; SEQ ID NO 72; 560pp; English.

The invention relates to a novel NOVX polypeptide. The polypeptide of the invention demonstrates cardiant, antiarteriosclerotic, hypotensive, cytostatic, anorectic, antidiabetic, immunosuppressive, anti-HIV, neuroporotective, nootropic, antiparkinsonian, antiasthmatic and gynaecological activities and may be useful in diagnosing, treating or preventing NOVX-associated disorders including cardiomyopathy, atherosclerosis, hypertension, cancer, obesity, diabetes, AIDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, AIDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, Parkinson's disease, asthma or fertility disorders. Furthermore, the polypeptides may be utilised as vaccines whilst the nucleic acids may be used as hybridisation probes, in gene therapy, chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The current sequence is that of the human NOV protein of the invention.

invention demonstrates cardiant, antiatration of properties, controlled to the cytostatic, antidiabetic, immunosuppressive, anti-HIV, neuroprotective, nontropic, antidiabetic, immunosuppressive, anti-HIV, neuroprotective, nootropic, antiparkinsonian, antiasthmatic and gynaecological activities and may be useful in diagnosing, treating preventing NoVx-associated disorders including cardiomyopathy, archerosis, hypertension, cancer, obsesty, diabetes, AIDS, multiple sclerosis, graft-versus-host disease, Alzheimer's disease, Parkinson's disease, asthma or fertility disorders. Furthermore, the polypeptides may be utilised as vaccines whilst the nucleic acids may be used as hybridisation probes, in gene therapy, chromosome mapping, tissue typing, preventive medicine and pharmacogenomics. The current sequence is that of the human NOV protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                          This is the amino acid sequence for the recombinant silkworm peptidoglycan recognition protein (PGRP). The PGRP can be used for the determination or purification of peptidoglycans, especially in assays for bacteria having peptidoglycans in their cell walls. (Updated on 17-OCT-
                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophilar. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insectioides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL3611), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB7072). The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

Indertification and quantification of N-linked glycoproteins using hydraxide chemistry, stable isotope labeling and mass spectrometry.";
Nat. Biotechnol. 21:660-666(2003).
-! FUNCTION: May plays a scavenger role by digesting biologically active peptidoglycan (PGN) into biologically inactive fragments. Has no direct bacteriolytic activity.
-! CATALYIC ACTIVITY: Hydrolyzes the link between N-acetylmuramoyl glycopeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Note-May be due to an intron retention. No experimental confirmation available, TISSUE SPECIFICITY: Strongly expressed in liver and fetal liver. Expressed to a much lesser extend in traverse colon, lymph nodes, heart, thymus, panoreas, descending colon, stomach and testis. SIMILARITY: Belongs to the N-acetylmuramoyl-L-alanine amidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LGPAFAGHSAGNI PDPVTSAYAASAQPQTQPACPFPSS

"Characterization of porche peptidoglycan recognition proteins: gene cloning and regulation on Annate immunity.";

Submitted (AUG-2002) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: May plays a seavenger role by digesting biologically active peptidoglycan (ENN) into biologically inactive fragments.

Has no direct bacceriolytic activity.

-!- CATALYMC ACTIVITY Hydrolyzes the link between N-acetylmuramoyl residues and L-amino acid residues in certain bacterial cell-wall glycopeptides.

A novel family of four human innate immunity pattern recognition modecules.";

"Peptidoglycan recognition proteins. A novel family of four human innate immunity pattern recognition modecules.";

"Peptidoglycan recognition modecules.";

"EDGL. Chem. 276:34664-34644(2001).

"FUNCTION: Binds specifically to peptidoglycan and Gram-positive bacteria. May play a rolle in innate/immunity.

"FUNCTION: Binds specifically to peptidoglycan and Gram-positive.";

SUBCIELLULAR LOCATION: Membrane-associated (Potential).

"TISSUE SPECIFICITY: High expressed in the esophagus, expressed also in tonsills and thymus and to a much lesser extent in the stomach, descending colon, rectum and brain.

"SIMILARITY: Belongs to the N-acetylmuramoyl-L-alanine amidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi;

Proc. Natl. Acad. Sci. U.S.A. 95:10078-10082(1998).

-!- FUNCTION: Binds specifically to peptidoglycan and triggers the propenoloxidase cascade which is an important insect innate immune defense mechanism.

-!- SUBUNT: Monomer (Probable).

-!- SUBUNT: SPECIFICITY: Strongly expressed in fat body with weak expression observed in hemocyte. No expression detected in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=98374308; PubMed=9707603; Rang D., Liu G., Lundstroem A., Gelius E., Steiner H.; Apptidoglycan recognition protein in innate immunity conserved from

"Isolation, characterization, and antimicrobial properties of bovine oligosaccharide-binding protein. A microbicidal granule protein of eosinophils and neutrophils.";
                                                                                                                                                                                                              J. Biol. Chem. 277:19658-19664 (2002).
-!- FUNCTION: Involved in innate immunity. Is microbicidal for Grampositive and Gram-negative bacteria and yeast.
-!- SUBCELLULAR LOCATION: Screted, cytoplasmic granules.
-!- TISSUE SPECIFICITY: Synthesized only in bone marrown. The mature protein is stored in the cytoplasmic granules of eosinophils and neutrophils but is absent from monocytes, lymphocytes, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Camelus dromedarius (Dromedary) (Arabian camel).
